Vitamins to VEGA !

28th. Apr. 2024

VITAMIN

01

Vitamins: Last week, the vitamin market has attracted more attention, and some varieties have risen strongly. VA, VE, and niacinamide manufacturers have continued to stop quoting and signing; on Friday, the VB1 factory stopped quoting again, and the price was strong; the VB12 mainstream factory's quotation was slightly raised, and attention increased; the overall vitamin market inquiry was active, and the transaction was average.

AMINO ACID

02

Tryptophan: The actual transaction price of manufacturers is around USD8.9/KG. Some factories offer lower quotations, and the overall market order signing is relatively weak. It is expected that the tryptophan market will be weak in the short term, and prices will tend to decline.

API

03

The veterinary drug raw material market maintained stable operation this week. The prices of some varieties were increased due to the influence of raw materials and supply, but the overall market demand was still general, mainly based on rigid demand purchases. At present, the doxycycline factory is still out of business, and the market price of levamisole hydrochloride has increased due to the influence of raw materials; the prices of colistin sulfate and neomycin are firm. Amoxicillin, florfenicol, tylosin sulfate, etc. maintained stable operation.

FOOD ADDITIVE

04

The food additive market was generally stable last week. For the sweetener series, the price of sucralose from all major manufacturers was stable at USD14.7/KG, with stable delivery; the delivery time of creatine monohydrate was tight, which was scheduled until end of May; for Xanthan gum, the mainstream manufacturers still stopped quoting, and the transaction price in the domestic market rose to USD3.3/KG. It is expected that the price will rise significantly after Labor Day.
